

IPS Science Summary

April 2016

In science we have had a blast going green! We started the month by exploring the process of recycling and played a Recycle Roundup game. The kids did a great job of putting trash in the correct bins! In honor of Earth Day, the students created some beautiful coffee filter earths by dropping liquid paint and watching the process of absorption! It was fun (and a little messy); we then discussed the importance of protecting our earth. All of the kids know a LOT about different ways to keep our environment clean.
