

Science:

The students have been exploring the science of sound. We experimented with different homemade instruments-we plucked rubber bands on cups and observed the vibration, we played with different water levels in glasses to hear how the pitch changes and we listened to our own voices to see how we can make sound!

The students also learned about animals that use echolocation to find their prey. We pretended to be dolphins and try to hear where the sounds were coming from-they did great!

Words we learned:

Sound waves

Vibration

Echolocation
